News

High impact news will create a lot of volatility during economic news release dates. Each news release has different levels of volatility in the market. Some news releases will cause high volatility in the short run where some news releases or economic projections can span from over several days to weeks & even months. It is best practice to use the economic data released to support your trading idea and plan your trading days ahead of time. This will save you a lot of time, headaches, and money. Especially if you're using **the commitment of traders report**, specifically **the traders of financial futures,** in conjunction with high impact news releases. Doing so will reveal what direction the market has decided to go from a week to weeks in advance allowing you to position yourself accordingly.
