Bitcoin (BTC)

BTC is an open source and decentralized peer-to-peer payment network. It is the world's first cryptocurrency that emerged in 2009. Bitcoin remains the most dominant cryptocurrency by market capitalization, surpassing the trillion-dollar mark this year in 2021. Bitcoins founder is unknown but linked to the pseudonym Satoshi Nakamoto. Bitcoins purpose is to enable transactions without the need for an intermediary such as a bank, as the blockchain network utilizes a public ledger comprised of various wallet addresses. This peer-to-peer style of transaction via individual wallet addresses characterizes all cryptocurrency transactions today.

Ethereum (ETH)

ETH was created by Vitalik Buterin in 2014. It is the worlds first open source blockchain the enables the execution of smart contracts. The network supports decentralized applications and decentralized finance. It can produce non-fungible tokens and fungible tokens. The ERC20 fungible token supports the establishment of other cryptocurrency tokens that run on the Ethereum network. Chainlink, Polygon, and Uniswap are the three largest ERC20 based cryptocurrencies by market capitalization. Non-fungible tokens, commonly referred to as NFT's include virtual art, virtual real estate, virtual trading cards.

Litecoin (LTC)

Litecoin is a peer-to-peer Internet currency that enables instant, near-zero cost payments to anyone in the world. Litecoin is an open source, global payment network that is fully decentralized without any central authorities. Mathematics secures the network and empowers individuals to control their own finances. Litecoin features faster transaction confirmation times and improved storage efficiency than the leading math-based currency. With substantial industry support, trade volume and liquidity, Litecoin is a proven medium of commerce complementary to Bitcoin.

*Stellar (XLM)

XLM is an open-source and decentralized multicurrency payment protocol. Stellar transactions are processed in 6 seconds at a minimal cost to the sender. Stellar facilitates cross-border transactions by acting as a bridge for fiat currencies. Fiat currencies can be transferred and converted to other fiat currencies using the Stellar protocol. The protocol also supports smart contracts. Stellar was created via a Ripple hard fork founded in 2017 by Jed McCaleb after leaving Ripple labs.

Basic Attention Token (BAT)

BAT is an ERC20 token and the utility token of Brave web browser ecosystem. Brendan Eich and Brian Bondy created the Brave browser and Basic Attention Token. Brendan Eich is known for inventing JavaScript and founding Mozilla. The browser is focused on user privacy and eliminating unsolicited advertisements. In order to advertise on the Brave browser. advertisers must be verified by Brave and pay for their advertisements using BAT. Brave browser users who view advertisements receive BAT as a reward.

Chainlink (LINK)

LINK is an ERC20 token and the utility token of the Chainlink network. Link was founded in 2014 by Sergey Nazarov and is the worlds largest decentralized oracle network. Chainlink's focus is to enhance smart contract capabilities and promote blockchain interoperability. Interoperability is the ability of computer systems or software's to operate, exchange and make use of information in conjunction with each other. Chainlink facilitates the inclusion of off-chain data significantly increases the scope of smart contract applications. Chainlink also supports blockchain interoperability as they have forged partnerships with several major blockchain networks, including Ethereum, Cardano, and Solana.

Bitcoin Cash (BCH)

BCH is a result form a hand fork in 2017 stemming from a disagreement among groups of bitcoin miners about the block size limit. At the same time of fork, all wallet addresses containing Bitcoin received an equivalent amount of Bitcoin Cash at the time of the hard fork. BCH aims to improve transaction speed while reducing transaction cost compared to Bitcoin.

Siacoin (SC)

Sia is a decentralized cloud storage platform secured by blockchain technology. The Sia storage network leverages underutilized hard drive capacity around the world to create a data storage marketplace that is more reliable and lower cost than traditional cloud storage providers. Sia has its own blockchain, and a utility token that powers it – the Siacoin.
