Volatility breeds opportunity....

- High impact news release Market
- Sentiment/COT Report Any major
- geopolitical events

## Holding Timeframe

Are you....

- Scalping?
- Day-Trading?
- Swinging?
- Holding?

## Risk Management

Allocate between 1-3% of equity per trade based on initial margin requirements. Never go past your risk threshold. The first objective will be to observe price action to then move our stop loss to breakeven. At times of ranging uncertainty it always seems best to reduce your positions or sit on your hands.

# Profit Targets

If your position shows a profit near 40% of the max potential gain, you should look to trail your stop loss behind price and lock in profits incase price reverses direction.

# Risk Free Trading

If your position shows a profit equal to your max potential loss, you should look to adjust your stop loss to breakeven/entry price
