In this lesson, you will learn how to chart using multiple time frames before initiating an entry or an exit in the foreign exchange market.

Triple Screen Technique

The Triple Screen Technique (3ST) was developed by Alexander Elder, a professional trader. Alexander theorized that each timeframe may conceal hidden divergences or chart patterns that will influence the trend. It is considered that the market is composed of three trends: the long term, the mid-term, and the short term trend. The long term timeframe will be used to evaluate the long term trend. The mid-term timeframe is the reference unit of time, it is the origin of your analysis. The short-term timeframe is used to enter or exit the market.

Trading Style	Long Term (Trend)	Mid-Term (Origin)	Short Term (Entry)
Buy & Hold	Weekly	Daily	4 Hour
Swing Trading	Daily	4 Hour	1 Hour
Intraday Trading	4 Hour	1 Hour	15 Min
Scalping	1 Hour	15 Min	5 Min
